Dearman.

Dearman Newsletter March 2016

March has been a month of continuing recognition for Dearman's cutting-edge clean cold technology, and of new arrivals. We are glad to welcome Colin Bennett and Simon Mansfield to the company, taking on the roles of Chief Engineer – Field Trials, and Head of Operations respectively. Both Colin and Simon bring valuable experience to the company's team at an important time as Dearman's zero-emission transport refrigeration system is prepared for certification ahead of its first commercial field trial.

Looking ahead, Dearman will be exhibiting alongside technology development partners Hubbard Products at the high-profile Commercial Vehicle Show, April 26-28. A full-size Dearman Engine, the technology at the heart of Dearman's clean cold and power technology suite, will be exhibited in the 'Cool Pavilion', stand 3E110. If you plan to attend the show, please do stop by.

Following research released last month highlighting the environmental benefits of zero-emission refrigeration systems, Dearman's cleaner cooler technologies have been covered in publications across the globe. This month has seen articles appear in Germany, Singapore, the Netherlands, and in the UK's most widely read broadsheet, The Telegraph. Full coverage can be found on our website, or by following the links.
