

Dearman Newsletter June 2016

June has been a busy, exciting and productive month for Dearman.

As you may be aware, our clean cold and power technology has gone into service for the first time with Sainsbury's. The three-month trial began earlier this month and so far the Dearman powered zero-emission refrigeration system has been performing well. It is supporting deliveries of chilled and frozen food to stores across London, reducing emissions of NOx, CO2 and particulate matter as it goes.

Establishing this trial has been a team effort and wouldn't have been possible without our partners, including Sainsbury's, Hubbard Products, Dawsonrental, Solomon Commercial and Air Products. We have also received enormous support from our investors and the Government - particularly Innovate UK and the APC.

This trial is merely the beginning for Dearman. We continue to work hard demonstrating the impact that our technology could have around the world. In recent months Dearman technology has featured prominently at the Commercial Vehicle Show, The International Festival of Business and at events hosted in Brussels and Rotterdam.

As a result, and thanks to the efforts of our sales team, we have genuine interest from world class companies in the UK, Europe and elsewhere, who are keen to trial our technology and potentially develop long term partnerships. Dearman is on the road in more ways than one.

One obvious challenge however is the UK's vote to leave the EU. The decision has created a degree of uncertainty which we will have to manage, but we have established a team to assess the impacts, to help overcome challenges and spot opportunities. Dearman was established to be an internationally focussed company and will remain so.

Toby Peters
CEO, Dearman
